

APRIL THROUGH JUNE 2006 REPORT
July 11, 2006

1. To increase providers' overall usage of the KIDSNET application

Goal: to increase overall quarterly usage of the KIDSNET application by 10% by the end of 2006, and by 20% by the end of 2007.

- KIDSNET usage has increased significantly in the first two quarters of 2006 due to increases in provider participation, overall usage of KIDSNET reporting, and the number of practices accessing the Internet. To date, 117 practices have Internet access, compared to 105 in 2005. The first quarter report of 2006 read 35,504 but included a keying error that caused a 6,669 over count. The second quarter report read 35,329 without any apparent keying errors. The second quarter monthly usages have been consistent at 11,803, 11,665 and 11,861 respectively.
- Outreach efforts, including messages sent to providers via the *KIDSNET Update*, information included in the KIDSNET database hot links, the "Message of the Day", the newly released features for the state supplied vaccine, as well as training and phone calls to providers may continue to have impact on the overall usage.
- In the second quarter of 2006, over 50% of practices accessed the system (73 in April; 65 in May; and 77 in June). This is a notable increase over the first quarter in 2006 (61 in January; 69 in February; 66 in March).

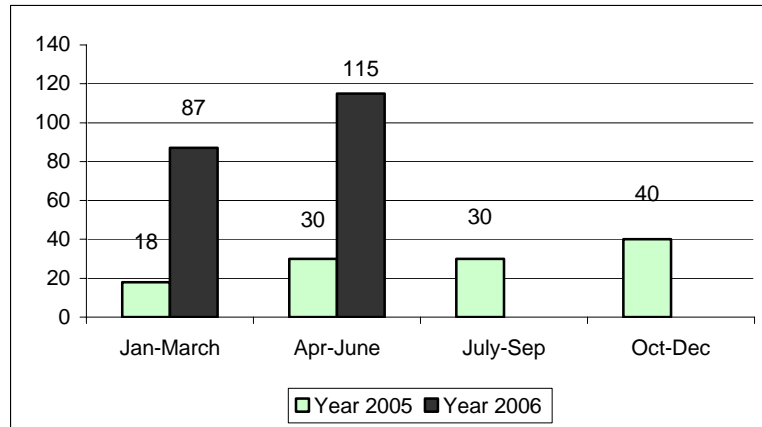

NOTE: The numbers shown in the graph for each quarter represent the number of "hits" or number of times providers accessed screens in KIDSNET. It does not include usage from other users.

APRIL THROUGH JUNE 2006 REPORT
July 11, 2006

2. To increase providers' usage of the on-demand KIDSNET exception reports

Goal: To increase by 50% providers' usage of the on-demand KIDSNET reports (currently Lead and Immunization) by the end of 2006, and by 70% from baseline by the end of 2007.

- By the end of June 2006, 128 provider practices were participating in KIDSNET, and 11 of them had no Internet access in the office, and could not use the report generation capability on their own, although they can request KIDSNET to generate reports for them.
- The report usage rose from 87 practices in the first quarter of 2006 to 115 practices in the second quarter, a 32% increase.
 - It is important to note that the Immunizations overdue report became available in November 2005; therefore, 30 providers using reports in April-June 2005 only had access to the lead report.
- The 115 provider sites represent 34 sites accessing reports in April, 39 sites in May, and 42 sites in June. A total of 59 unique practice sites ran a report at least once during the quarter. Of these practice sites, 51 have run both reports at some time during the quarter.
- Pediatric providers were informed about the intent to measure the reports' usage through our monthly publication, the *KIDSNET Update*. This may have had some influence in the impressive increase in the use of reports.

NOTE: The graph above indicates the number of provider practices that have used either one or both of the reports during each of the months in the quarter (Ex.: if the provider generates one or two of the reports, the provider is counted ONCE a month for purposes of this measure).
